Summary

Software Developer with multiple certificates of excellence specializing in high-performance web systems and Generative AI integration. Experienced in scalable solutions using LangChain, RAG, AI agents, full-stack development, and data-driven workflows. Proven record of delivering production-ready tools under pressure.

TECHNICAL SKILLS

AI & Data Science: LangChain, RAG, Prompt Engineering, Vector Databases (PostgreSQL/pgvector)

Full-Stack: Python, C#, TypeScript, React, Node.js, Express, SQL

Infrastructure: Docker, REST APIs, Git, Client-Server Architecture

Soft Skills: Independent learning, rapid adaptation, time management, collaboration

LANGUAGES

Hebrew: Native

English: Full Professional Proficiency

Projects

AI-Powered book discovery website

- Developed a book discovery website using React and Node.js that enables semantic book discovery through Natural Language Processing.
- Engineered a custom RAG search engine that combines vector similarity (pgvector with PostgreSQL) with full-text search for maximum discovery precision.
- Built a search cache layer to store AI embeddings, reducing API costs & improving recurring query speeds.
- Developed an affiliate-driven monetization engine mapping 45,000+ ISBNs to Amazon affiliate links.

Military Service

Head of Special Forces Selection Unit | Aug 2023 – June 2026

- Awarded **Certificate of Excellence** for leadership and operational performance.
- Led and mentored a high-performing team of 5 soldiers, managing complex placement systems for elite units under extreme workload.
- Designed and implemented custom software tools and database management scripts that served as the primary interface for real-time decision-making in elite unit placements.
- Automated and optimized data analysis workflows using SQL, Excel, and SAP, improving the accuracy and efficiency of candidate selection processes.

Education

Full Stack Development Course | John Bryce | Mar 2025 – Feb 2026

- Graduated with **Academic Honors**.
- Engineered responsive web applications and complex database schemas using React, Node.js, and SQL.
- Architected and deployed Generative AI solutions utilizing LangChain and RAG frameworks.
- Completed practical projects emphasizing client-server architecture, database management, and information security.

Blich High School | Ramat Gan | Sept 2019 – June 2023

- High School Diploma with **Academic Honors**.
- Majored in Cyber Security, Computer Science, Physics, Mathematics, and English (All 5 Units).
